PERSONAL STATEMENT

A highly motivated Computer Science student with strong teamwork and organisational skills developed through academic projects and professional experience. I have explored a range of coding challenges, from developing a seating management website to building a neural network on a microcontroller, and applying Agile development principles to deliver iterative, high-quality solutions. These experiences strengthened my problem-solving, critical thinking, and collaborative skills. I am eager to continue learning and expanding my abilities through personal, academic, and professional development, and I look forward to applying my knowledge to create innovative solutions that tackle complex challenges and enhance user experiences.

PROFESSIONAL EXPERIENCE

Kingston University June 2025 – August 2025

Full-Stack Developer – Endorsed by *CSE Connect*

- Worked collaboratively within a cross-functional team and stakeholders to develop a dynamic React web application for event seating management
- Designed modern UI layouts in Figma, incorporating current design trends and usability principles
- Applied Agile methodologies to build reusable, scalable React components, improving project structure and maintainability

Kingston University September 2024 –March 2025

Academic Mentor

- Collaborate with faculty during workshop sessions to ensure students' learning needs are met
- Provide feedback and study strategies to help students improve their academic performance

Delivery Management Ltd August 2022

Machine Learning Engineer

- Trained and deployed machine learning models on embedded systems to support project objectives
- Researched and applied computer science concepts with the team to improve project outcomes

Henson IT Solutions July 2022

Software Developer

- Designed and developed a platformer game in Unity to apply game development concepts
- Gained hands-on experience with web and application development workflows

TECHNICAL SKILLS

- **Programming Languages and Unit Testing**: Proficient in Java, JavaScript, Python, React, React Native, Kotlin.
- **Requirements Gathering**: Experienced in capturing, evaluating, validating, and documenting requirements using industry-standard methods, techniques, and tools.
- **UI/UX Design**: Utilised prototyping tools like Figma to design and apply principles of effective user experience
- **Web Development**: Developed multiple websites using HTML, CSS, PHP, React and JavaScript, with attention to responsive design and best practices.
- **Databases**: Hands-on experience in building and managing databases using Relational Database Management Systems (RDBMS) and MySQL.
- **RESTful APIs:** Designed and integrated RESTful APIs to support frontend and backend communication using JSON and CRUD operations.
- **Computer Science Fundamentals:** Solid understanding of data structures, algorithms, computer architecture, digital logic, data processing concepts, networking, and virtualisation.
- **Object-Oriented Programming (OOP):** Applied advanced OOP concepts in developing an interactive planner and CV builder application.
- **Machine Learning & Embedded Systems:** Built movement recognition programs using microcontrollers, applying machine learning concepts for hardware interaction.
- **Version Control (Git):** Applied Git best practices to manage code changes and collaborate effectively across personal, work, and team projects.

EDUCATION

Kingston University September 2023 – June 2026

BSc Computer Science

Harris City Academy Crystal Palace September 2021 - 2023

A-Level Computer Science, Mathematics, Physics

CERTIFICATIONS & TRAINING

- DataCamp - Introduction to Python
- LinkedIn – Learning REST APIs
- LinkedIn - JavaScript Essential Training

LANGUAGES

- English
- Italian
- Bengali
